Headlining Story – Bioscience Strand @ ASU!

2022/23 MET Students,

Last week at the MET Professional Academy, on Tuesday, Bioscience took a field trip to ASU. They had discussions with forensic and biology professors. The Bioscience strand learned about fish jaw biology and evolution, forensic entomology, forensic DNA and genomic traits, and shark studies. One student described it as "a really good way to familiarize themselves with the ASU campus and the professional lab environment, as well as looking at what each professor did to launch their career, and the steps we may have to take."

Sincerely,
2022/23 MET Student Ambassadors
